# Advances In Understanding Schizophrenia: From Fulton and Jacobsen to Goldman-Rakic and Beyond

Yale has a long distinguished tradition of research on the biological basis of schizophrenia.

Amy Arnsten, Professor of Neurobiology, will discuss how this tradition began with Drs. John Fulton and Carlyle Jacobsen, and connect it to the pioneering studies of Patricia Goldman-Rakic, cut short by her untimely death.

She will finish with her own pioneering research and some of the groundbreaking work being done in Psychiatry by Dr. John Krystal and colleagues; explaining where we are and what the prospects are for the future.

Fulton-Cushing Lecture  
Series of the Axion Research  
Foundation

5:30 PM Reception in the  
Historical Gardens, 100  
Deepwood Drive, Hamden

6:00 PM Amy Arnsten, PhD

Registration Deadline:

April 27, 2011
